TO SELECT A PRESSURE BOOSTING SET

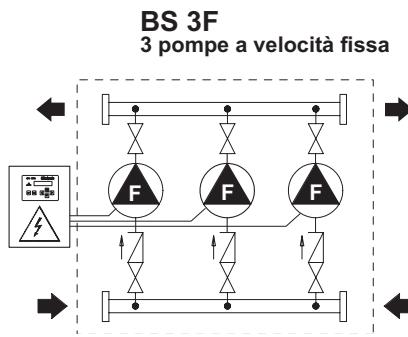

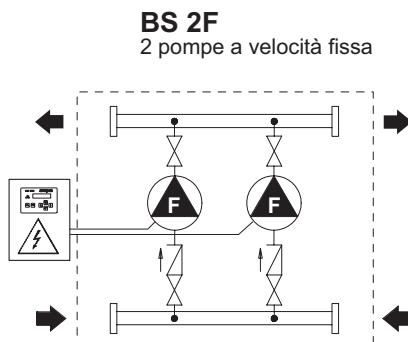

BS

BSF

2 and 3 fixed speed pumps

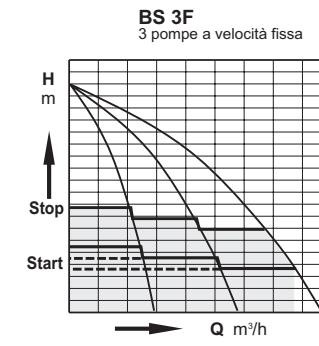

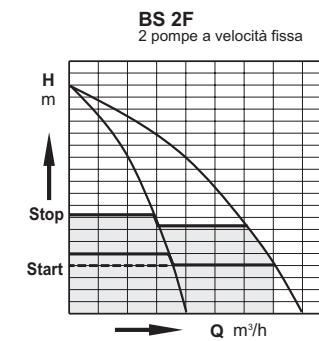

Construction

Pressure boosting sets with automatic operation, consisting in 2 and 3 pumps on a common baseplate, with suction and delivery manifolds, gate and non-return valves, pressure switches, pressure gauge, control panel and

**Functioning mode**

The control panel, with electronic card, manages the pump operation, the changeover of pump starting sequence and it stops the system when there is no air in the tank (patented system).

Pumps starting in a cascade sequence, with a signal from the pressure switches.

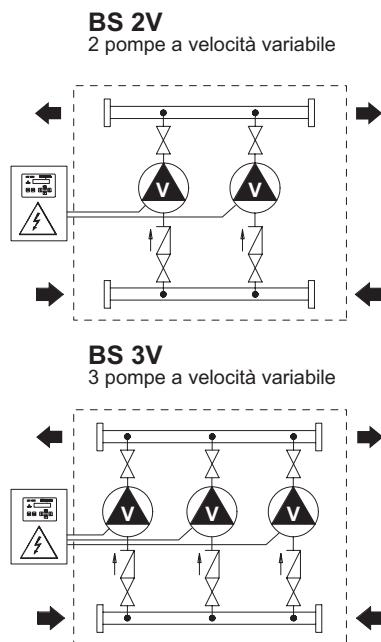

BS

BSV

2-6 variable speed pumps (with frequency converter)

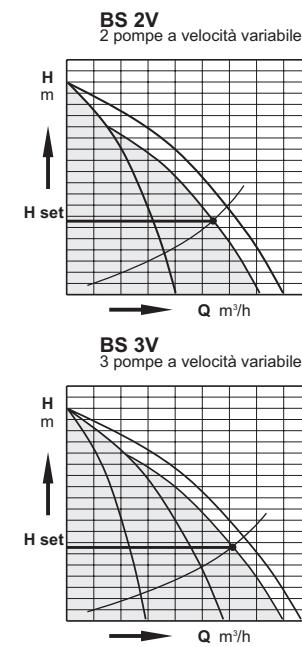

Construction

Pressure boosting sets with automatic operation, consisting of variable speed pumps (from 1 to 6) with frequency converter, assembled on a common baseplate, with suction and delivery manifolds,

**Functioning mode**

The control panel, with electronic card, manages the pump operation, the changeover of pumps starting sequence.

Pumps starting is in a cascade sequence, with a signal from the pressure transducer.

Fixed speed pump units

Fixed speed pump units New electrical control panels

New electrical control panels for pressurisation units, all with electronic card with microprocessors, for managing pump operation.

The microprocessor carries out continuous secure checks during all the various work phases of the pumps and incorporates all necessary functions, thus reducing electrical and electronic components inside the panel.

In particular:

- - pumps starting in a cascade sequence according to water demand.
- - changeover of pump starting sequence.
- - delay start-up of the 2nd/3rd pump in case of breakdown of pressure switch 1 or after a power cut.
- - avoid pump starting in case of water hammering.
- - activate the alarm when pressure 1 fails.
- - activate the alarm when air cushion in the vessel drops.
- - stop the pump when air cushion is over.

Maximum clarity for all signals

The status of the unit can easily be identified on the front of the electronic card with the following signals:

- - Power on.
- - No water.
- - Failure.
- - Pump running.
- - Thermal block.
- - Pump automatic operation.
- - Pump stop.

Maximum simplicity of control

The front of electronic card features the following signals and controls:

- - AUT-STOP push-button (1 for each pump)
- - MAN push-button (1 for each pump)
- - RESET push-button.

Optional remote control

The RA 100 panel enables a remote warning light and acoustic signal.

Control panel for units up to 6 pumps

Using the MPS 6000 (Multi Pumps System) electronic card it is possible to control pressure units up to a maximum of 6 fixed speed pumps with a single pressure calibration.

Automatic air supply systems

The pump control panels are completed by microprocessor controlled systems for automatic air supply in the pressure vessels by means of a compressor or solenoid valve. Operation

Functioning mode

For booster sets made up to three pumps: according to the pressure decrease in the system, the pressure switches (pressure transducer for 3-pump sets) make the pumps to start in cascade mode and the starting changeover is made by the microprocessor.

For sets made of 4, 5, 6 pumps: Operation controlled by a microprocessor with signal from a pressure transducer. The pumps operate with only one pressure setting. The pumps operate with only one pressure setting.

BS

Variable speed pump units with EASYMAT

EASYMAT for variable speed pump units.

Variable speed system driven by frequency converter, for the pressure control in domestic and residential plants.

The system maintains constant pressure whilst the controlling the pump operation against changing system demand.

Maximum clarity for all signals

Easymat is equipped with a control panel for simple system programming and parameter monitoring.

2 scroll buttons are used to scroll the different operating parameters that EASYMAT can show.

At the same time you can use the 2 scroll buttons to move in the set up menu and to change the different options.

The LCD custom display gives an easy overview of the system situation and of the operating parameters.

The icons on the top and below the display area explain in which way EASYMAT is working and if there are problems on the system.

The four set-up buttons allow the operator to move between and set-up the menu's and to start and stop the pump. The symbols help to make the function of each button clear.

With these 4 buttons and the 2 scroll buttons you can manage all the set-up and operating parameters without the use of an other control panel or computer.

Functioning mode

Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

The system is connected to the delivery pipe providing for simple installation and better cooling (patented) making the unit more compact and easy to assemble.

Easymat is supplied with one pressure transducer, G 1/4 connection and 1.5 m cable length.

For protection of the pump:

- Against dry running
- – Against operations with closed connection ports
- – Against overcurrent of the motor
- – Against overvoltage and undervoltage of the power supply

Silent operation

Motors working at reduced speed and check valves that close gradually mean that operation is particularly quiet.

Long life for pumps

All the mechanical components of the pumps and motors are stressed to a minimum, due to the variable speed operation.

Energy saving

The motors consume only the precise level of power necessary moment to moment, in order to supply the quantity of water required by the system.

No more high capacity vessels

The use of inverters means that high capacity pressure vessels and membrane vessels are no longer necessary. Even units with high flowrate pumps only require a small number of 20 litre membrane vessels.

Constant pressure mode

The system keeps the pressure constant when the quantity of water requested by the user changes. The user can choose the operating pressure according his needs.

Fixed speed mode

The system works at a fixed speed that user can choose according his needs.

Variable speed pump units with EASYMAT4

EASYMAT2 for variable speed pump units.

Variable speed system driven by frequency converter, for the pressure control in domestic and residential plants.

The system maintains constant pressure whilst the controlling the pump operation against changing system demand.

Maximum clarity for all signals

Easymat2 is equipped with a control panel for simple system programming and parameter monitoring.

2 scroll buttons are used to scroll the different operating parameters that EASYMAT can show.

At the same time you can use the 2 scroll buttons to move in the set up menu and to change the different options.

The LCD custom display gives an easy overview of the system situation and of the operating parameters.

The icons on the top and below the display area explain in which way EASYMAT2 is working and if there are problems on the system.

Functioning mode

Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

For protection of the pump:

- Against dry running
- – Against overcurrent of the motor
- – Against overvoltage and undervoltage of the power supply

Silent operation

Motors working at reduced speed and check valves that close gradually mean that operation is particularly quite.

Long life for pumps

All the mechanical components of the pumps and motors are stressed to a minimum, due to the variable speed operation.

Energy saving

The motors consume only the precise level of power necessary moment to moment, in order to supply the quantity of water required by the system.

No more high capacity vessels

The use of inverters means that high capacity pressure vessels and membrane vessels are no longer necessary. Even units with high flowrate pumps only require a small number of 20 litre membrane vessels.

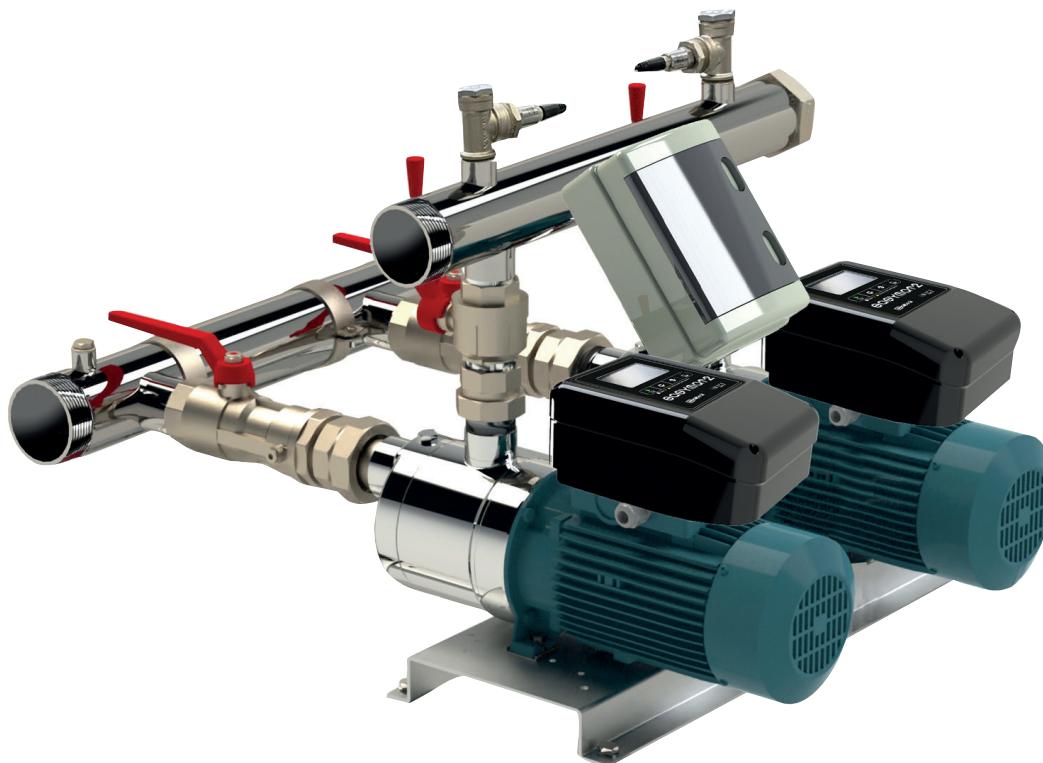

Constant pressure mode

The system keeps the pressure constant when the quantity of water requested by the user changes. The user can choose the operating pressure according his needs.

Fixed speed mode

The system works at a fixed speed that user can choose according his needs.

BS

Variable speed pump units with WALL

WALL for variable speed pump units.

Variable speed system driven by frequency converter, for the pressure control in domestic and residential plants.

The system maintains constant pressure whilst the controlling the pump operation against changing system demand.

Maximum clarity of signals

WALL is equipped with a control panel that allows to carry out the set-up of the system and to monitor all system parameters.

The 4 set-up buttons are created to enter and to move on the set-up menus and to start and to stop the pump. The symbols help to understand the function of each button. With these 4 buttons and the 2 scroll buttons you can manage all the set-up

For protection of the pump:

- Against dry running
- – Against overcurrent of the motor
- – Against overvoltage and undervoltage of the power supply

Functioning mode

Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

Silent operation

Motors working at reduced speed and check valves that close gradually mean that operation is particularly quite.

Long life for pumps

All the mechanical components of the pumps and motors are stressed to a minimum, due to the variable speed operation.

Energy saving

The motors consume only the precise level of power necessary moment to moment, in order to supply the quantity of water required by the system.

No more high capacity vessels

The use of inverters means that high capacity pressure vessels and membrane vessels are no longer necessary. Even units with high flowrate pumps only require a small number of 20 litre membrane vessels.

Constant pressure mode

The system keeps the pressure constant when the quantity of water requested by the user changes. The user can choose the operating pressure according his needs.

Fixed speed mode

In this operating mode the system work as a fixed speed pump. The speed of the pump could be set by the user between a range of speeds, or controlled by an external signal.

Variable speed pump units with I-MAT

I-MAT for variable speed pump units.

Variable speed system driven by frequency converter, for the pressure control in domestic and residential plants.

The system maintains constant pressure whilst the controlling the pump operation against changing system demand.

Maximum clarity of signals

I-MAT is equipped with a control panel that allows to carry out the set-up of the system and to monitor all system parameters.

It is possible use the control panel in remote positions by means a cable with M12 connectors (standard cable).

The LCD custom display gives an easy overview of the system situation and of the operating parameters.

The 4 set-up buttons are created to enter and to move on the set-up menus and to start and to stop the pump. The symbols help to understand the function of each button. With these 4 buttons and the 4 scroll buttons you can manage all the set-up

For protection of the pump:

- Against dry running
- – Against operations with closed connection ports
- – Against overcurrent of the motor
- – Against overvoltage and undervoltage of the power supply
- – Against overvoltage and undervoltage of the power supply

Functioning mode

Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

Silent operation

Motors working at reduced speed and check valves that close gradually mean that operation is particularly quite.

Long life for pumps

All the mechanical components of the pumps and motors are stressed to a minimum, due to the variable speed operation.

Energy saving

The motors consume only the precise level of power necessary moment to moment, in order to supply the quantity of water required by the system.

No more high capacity vessels

The use of inverters means that high capacity pressure vessels and membrane vessels are no longer necessary. Even units with high flowrate pumps only require a small number of 20 litre membrane vessels.

Constant pressure mode

The system keeps the pressure constant when the quantity of water requested by the user changes. The user can choose the operating pressure according his needs.

Proportional pressure modes

Proportional pressure reduces the pressure of the pump (and as a consequence, the operating frequency) proportionally with the water demand of the system.

Constant temperature mode

In this operating mode the system is used to keep the temperature at a constant value in a specified system point.

Constant flow mode

Constant flow mode grants that system change the speed of the pump in order to keep constant the flow which pass inside a flow meter.

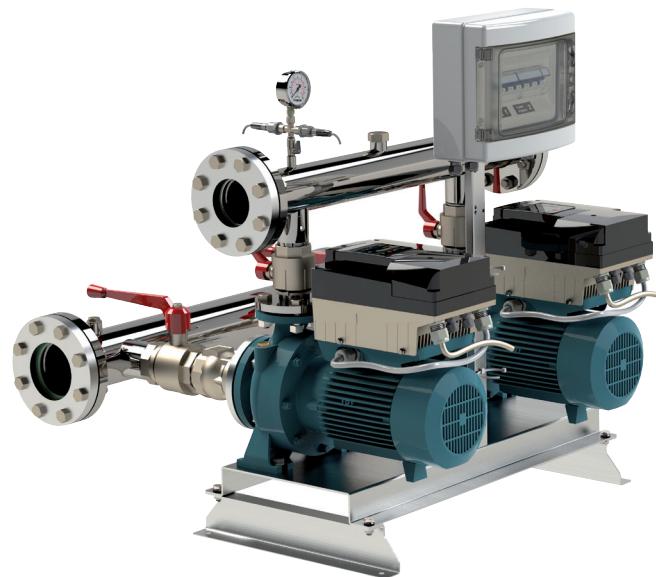

Fixed speed mode

In this operating mode the system work as a fixed speed pump. The speed of the pump could be set by the user between a range of speeds, or controlled by an external signal.

Night mode

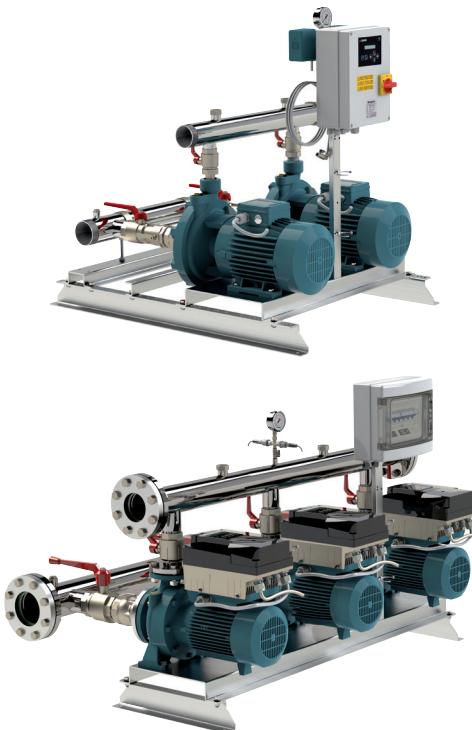

The night mode is an optional mode which allows to reduce the speed of the pump if the temperature in the system decreases below a set value, this operating mode can be used with all operating modes over described.

BS, NM, NMD

Pressure units with 1 to 3 fixed or variable speed centrifugal pumps (INVERTER)

Fixed speed units

BS 2-6F Units with 2 to 6 fixed speed pumps

Sets with 4,5 and 6 pumps on request.

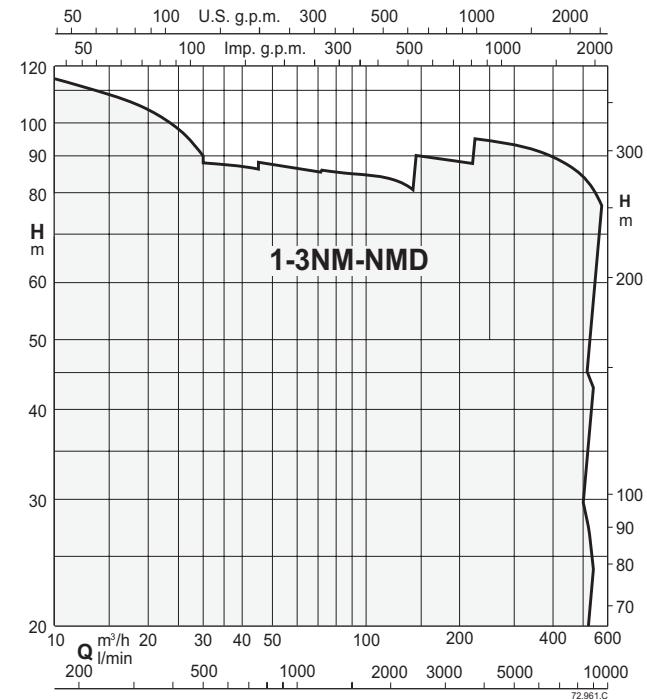

Depending on the reduction of the pressure in the system, the pressure switches (pressure transducer for 3-pump sets) determine the starting up of the pumps in sequence and the microprocessor alternates the starts.

Variable speed units with I-MAT

BS2-3V Pressure boosting sets with 2 to 3 variable speed pumps (with I-MAT).

Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

Coverage chart

Construction

Automatic pressure boosting plant consisting of 1 to 6 centrifugal pumps complete with ball, non return valve on the suction side and ball valves on the delivery side.

Suction and delivery manifolds for boosting

- stainless steel AISI 304 up to 2NM 40.. and 3NM 32...
- - steel S235JR from 2NM 50.. and 3NM 40....

Set up for mounting cylindrical tanks with G1 connection.

Electrical control boards:

- with microprocessor for fixed speed pump units. Motor starting is D.O.L. up to 5,5 kW and Y/Δ for power rating 7,5 up to 55 kW.
- - with frequency converter for variable speed pump units.

The unit includes one pressure gauge and three adjustable differential pressure switches or pressure transducer.

Applications

To supply water in civil and industrial buildings.

For increasing network pressure (follow local specifications).

Motor

2-pole induction motors, 50 Hz, $n \approx 2900$ 1/min, set up for inverter operation.

Three-phase: $230/400V \pm 10\%$ up to 3 kW;
 $400/690V \pm 10\%$ for 4 kW to 55 kW;

Insulation class F.

Protection IP54

Constructed in accordance with: IEC 60034.

Other voltages and frequencies on request.

Vessels on request

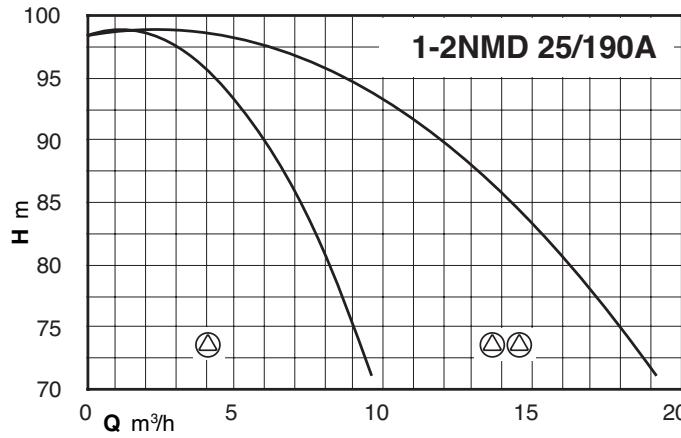

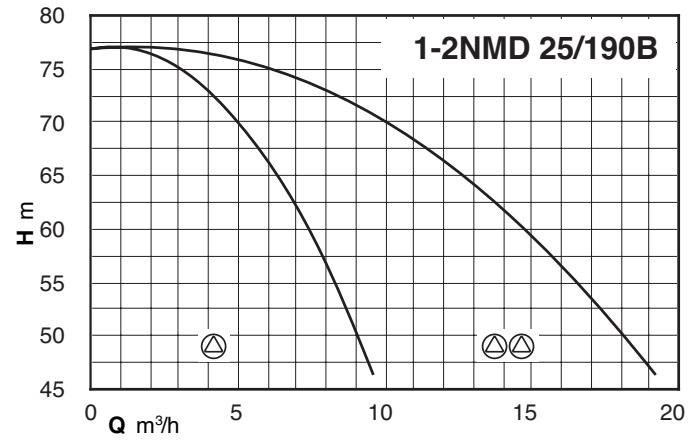

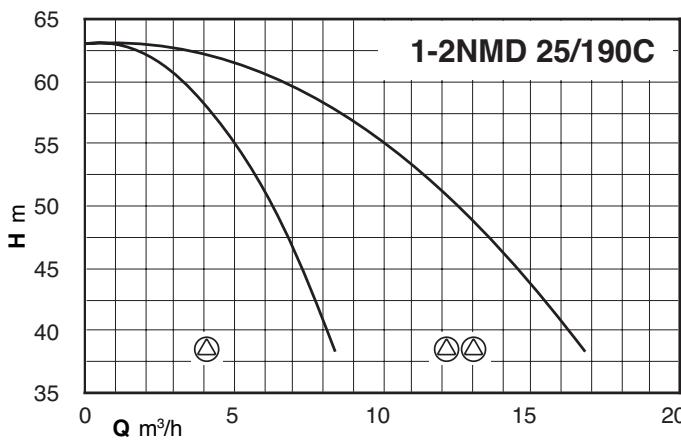

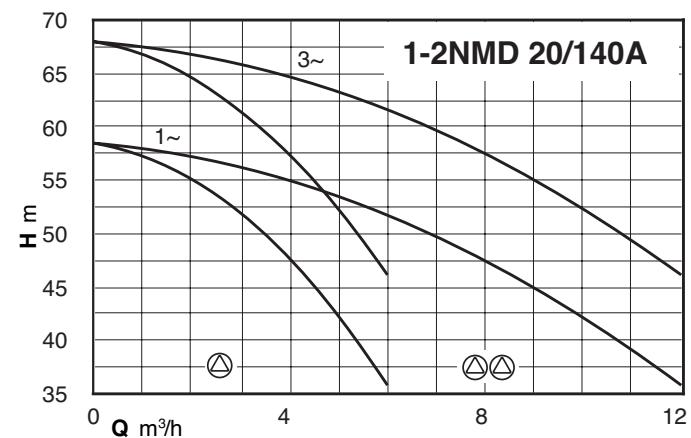

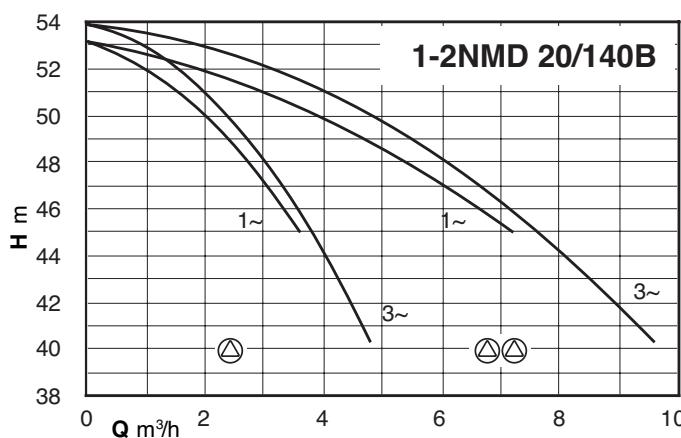

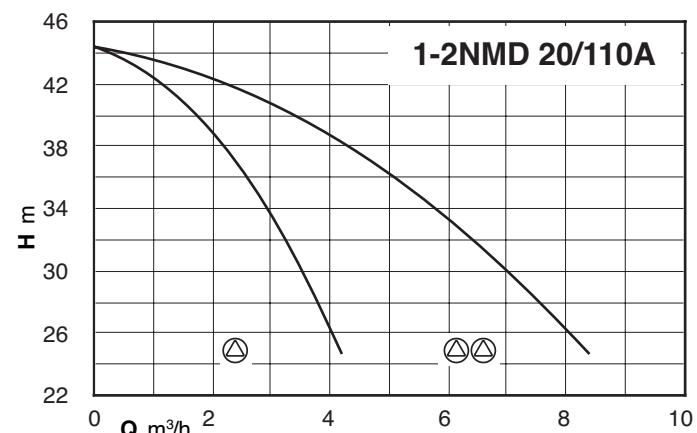

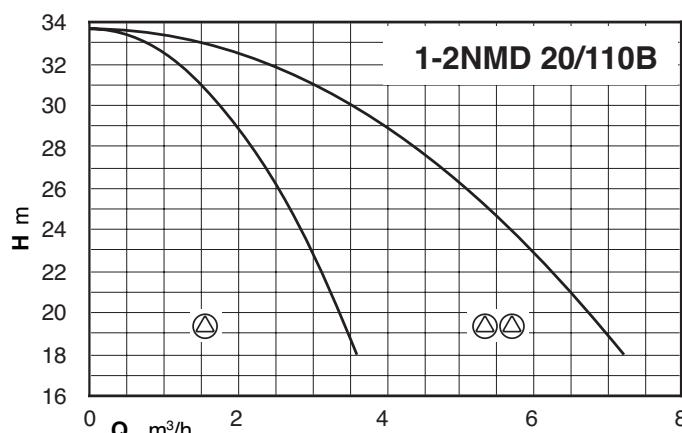

When installing the unit, connect in the delivery section to a diaphragm or galvanised tank.

The recommended sized are shown in the following page.

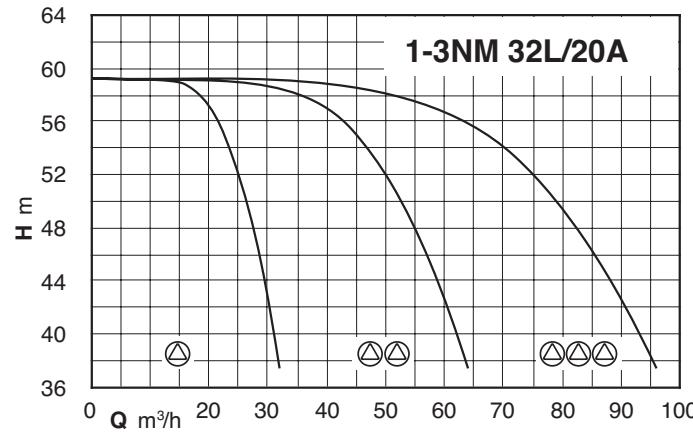

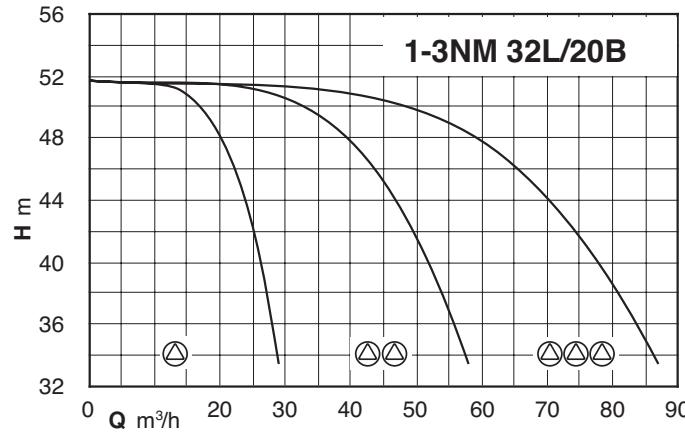

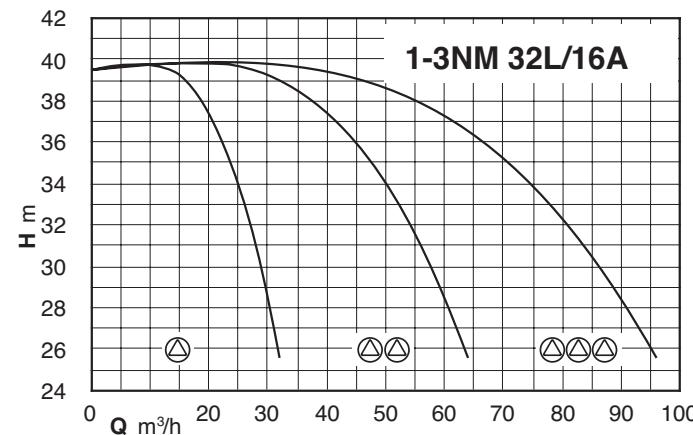

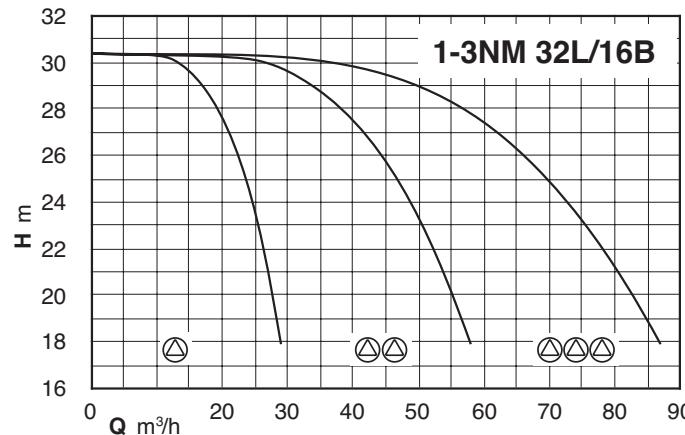

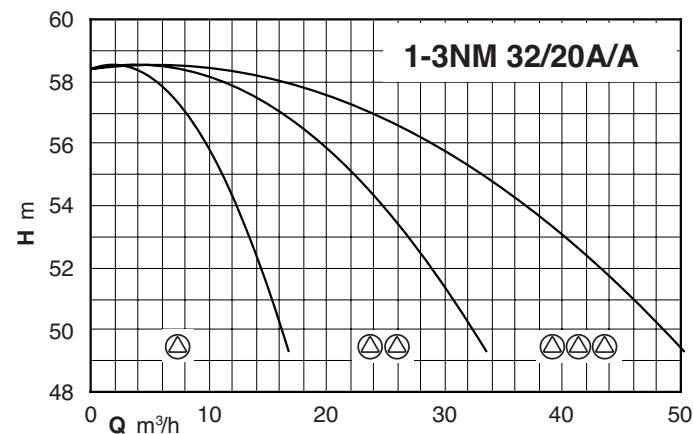

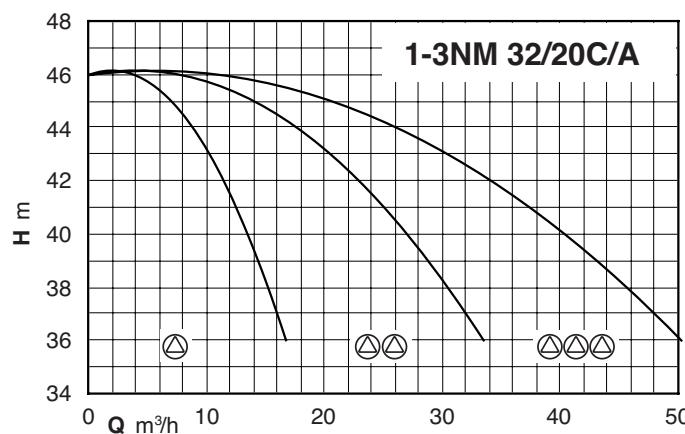

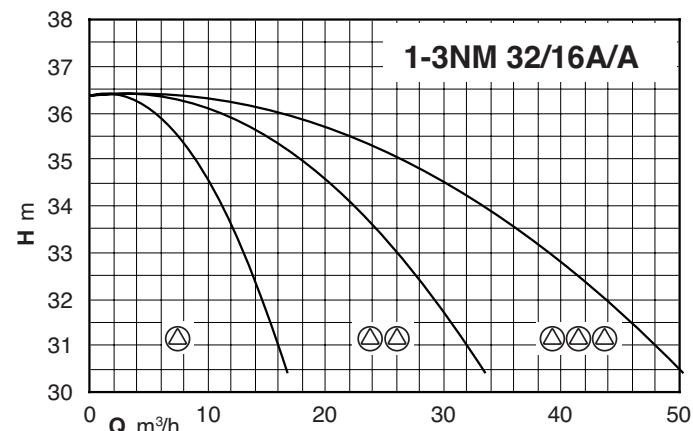

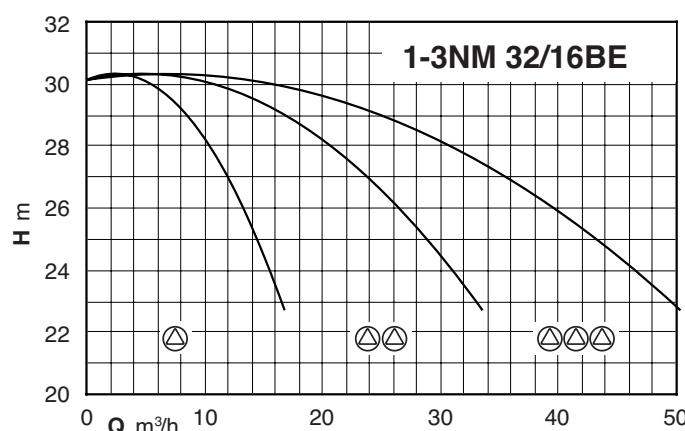

Special features on request

Pressure unit with 4, 5 and 6 pumps

Non-binding dimensions to be checked when ordering

Missing dimensions on request

Pressure boosting plants with 1 to 3 fixed or variable horizontal multi-stage pumps (INVERTER)

Fixed speed units

BS 2-6F Pressure boosting sets with 2 to 6 fixed speed pump.

Sets with 4,5 and 6 pumps on request.

Depending on the reduction of the pressure in the system, the pressure switches (pressure transducer for 3-pump sets) determine the starting up of the pumps in sequence and the microprocessor alternates the starts.

Variable speed units with I-MAT

BS2-3V Pressure boosting sets with 2 to 3 variable speed pumps (with I-MAT).

Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

Variable speed units with EASYMAT

BS1-3V Pressure boosting sets with 1 to 3 variable speed pumps (with EASYMAT).

Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

Variable speed pump units with EASYMAT2

BS2V Pressure boosting sets with 2 variable speed pumps with EASYMAT2.

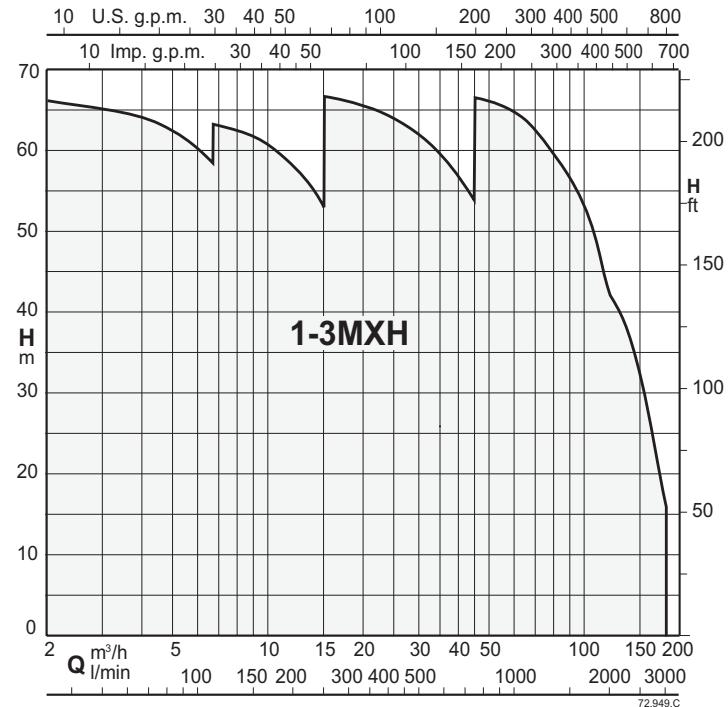

Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

Variable speed pump units with WALL

BS2V Pressure boosting sets with 2 variable speed pumps with WALL.

Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

Coverage chart

Construction

Automatic pressure boosting plant consisting of 1 to 6 vertical multistage pumps complete with ball, non return valve on the suction side and ball valves on the delivery side.

Suction and delivery manifolds for boosting sets with 2,3 pumps in stainless steel AISI 304.

Connections are located on the delivery manifold for the installation of vessels G1 connection.

Electrical control boards:

- with microprocessor for fixed speed pump units. Motor starting is D.O.L. up to 5,5 kW and Y/Δ for power rating 7,5 kW.
- - with frequency converter for variable speed pump units.

The unit includes one pressure gauge and three adjustable differential pressure switches or pressure transducer.

Applications

To supply water in civil and industrial buildings.

For increasing network pressure (follow local specifications).

Motor

2-pole induction motors, 50 Hz, $n \approx 2900$ 1/min, set up for inverter operation.

Three-phase 230/400V $\pm 10\%$ up to a 3 kW,

set up for inverter operation;

400/690 $\pm 10\%$ da 4 a 7,5 kW,

set up for inverter operation.

Single-phase 230 V $\pm 10\%$

Insulation class F.

Protection IP54

Constructed in accordance with: IEC 60034.

Other voltages and frequencies on request.

Vessels on request

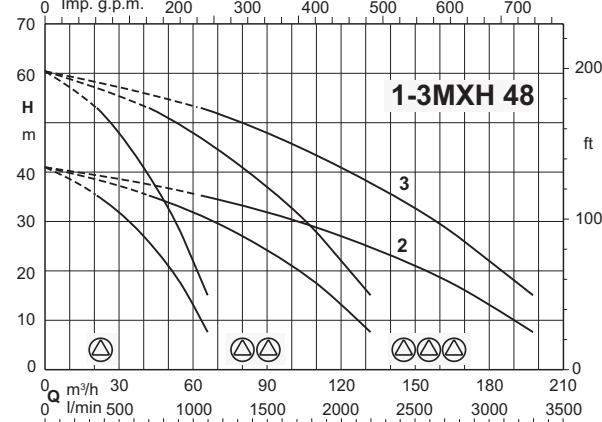

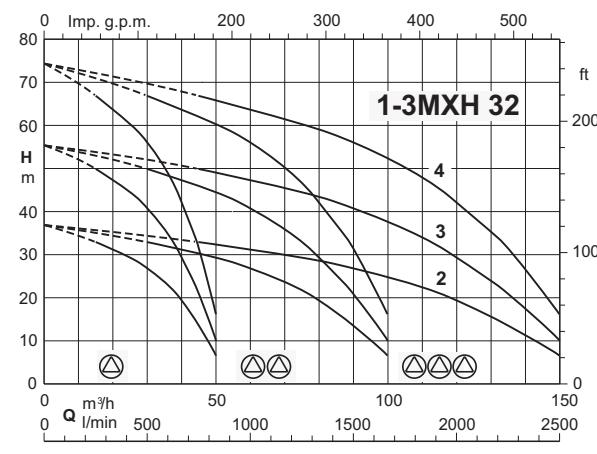

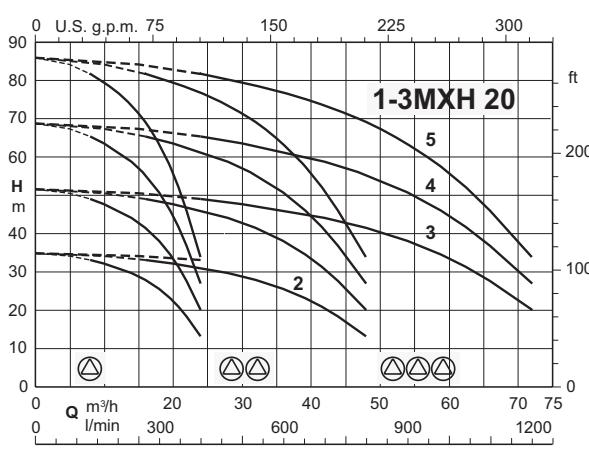

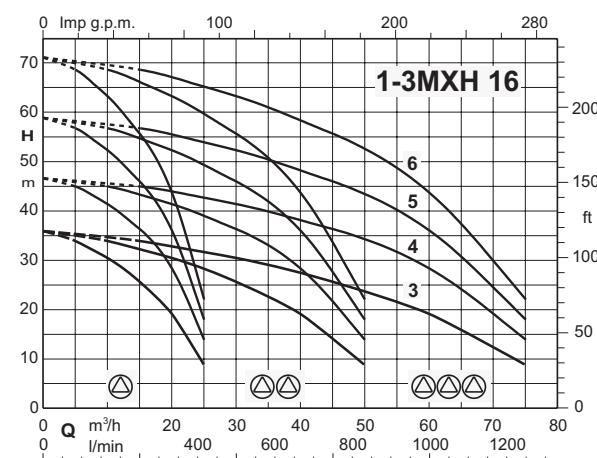

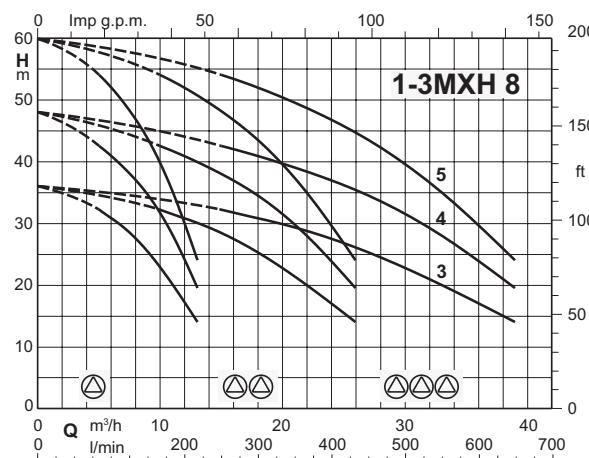

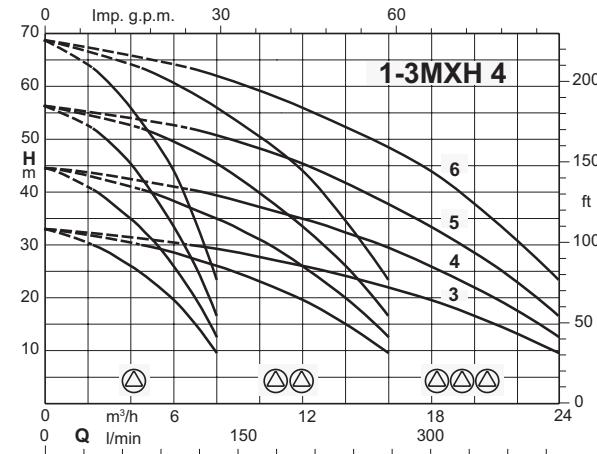

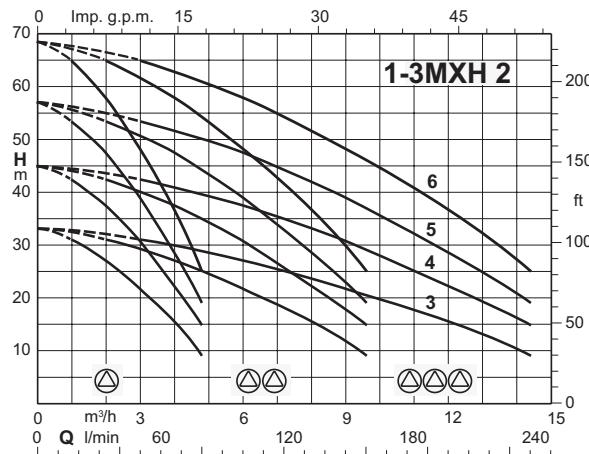

When installing the unit, connect in the delivery section to a diaphragm or galvanised tank.

The recommended sized are shown in the following page.

Special features on request

Pressure unit with 4, 5 and 6 pumps

Characteristic curves

Fixed speed pump units

BS, MPSU

Pressure units with 1 to 3 multi-stage vertical, fixed or variable speed pumps (INVERTER)

Fixed speed units

BS 2-6F Pressure boosting sets with 2 to 6 fixed speed pump.

Sets with 4,5 and 6 pumps on request.

Depending on the reduction of the pressure in the system, the pressure switches (pressure transducer for 3-pump sets) determine the starting up of the pumps in sequence and the microprocessor alternates the starts.

Variable speed units with EASYMAT

BS1-3V Pressure boosting sets with 1 to 3 variable speed pumps (with EASYMAT).

Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

Construction

Automatic pressure boosting plant consisting of 1 to 6 vertical multistage pumps complete with ball, non return valve on the suction side and ball valves on the delivery side.

Suction and delivery manifolds for boosting sets with 2,3 pumps in stainless steel AISI 304.

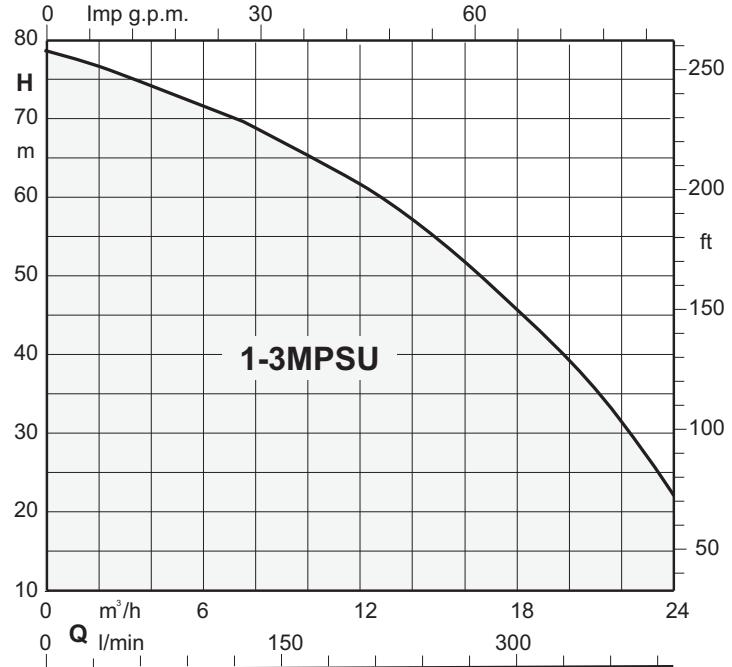

Connections are located on the delivery manifold for the installation of vessels G1 connection.

Electrical control boards:

- with microprocessor for fixed speed pump units. Motor starting is D.O.L. up to 5,5 kW and Y/Δ for power rating 7,5 kW.
- - with frequency converter for variable speed pump units.

The unit includes one pressure gauge and three adjustable differential pressure switches or pressure transducer.

Coverage chart

Applications

To supply water in civil and industrial buildings.

For increasing network pressure (follow local specifications).

Motor

2-pole induction motors, 50 Hz, $n \approx 2900$ 1/min.

Three-phase 230V - 400V $\pm 10\%$;

Single-phase 230 V $\pm 10\%$.

Insulation class F.

Protection IP 68.

Constructed in accordance with IEC 60034.

Other voltages and frequencies on request.

Vessels on request

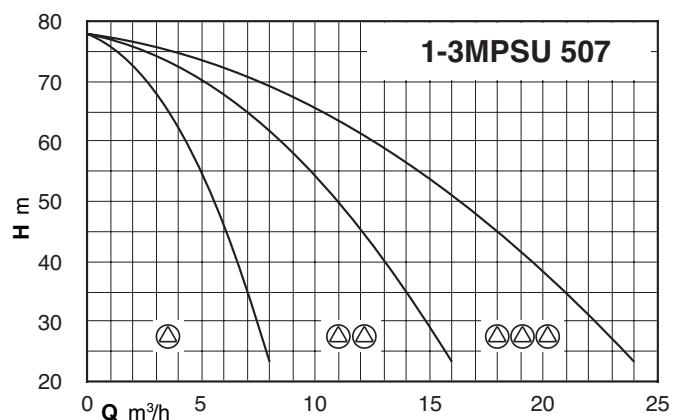

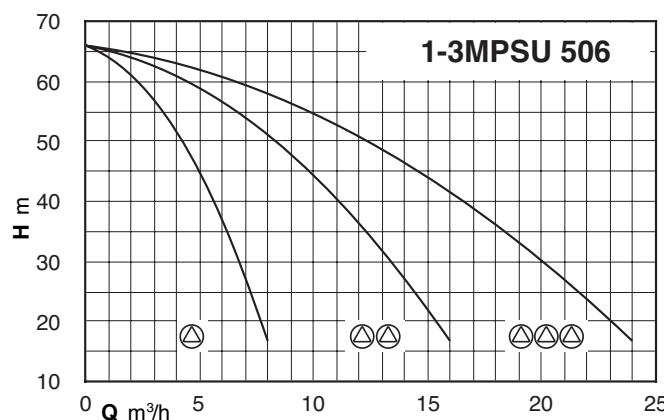

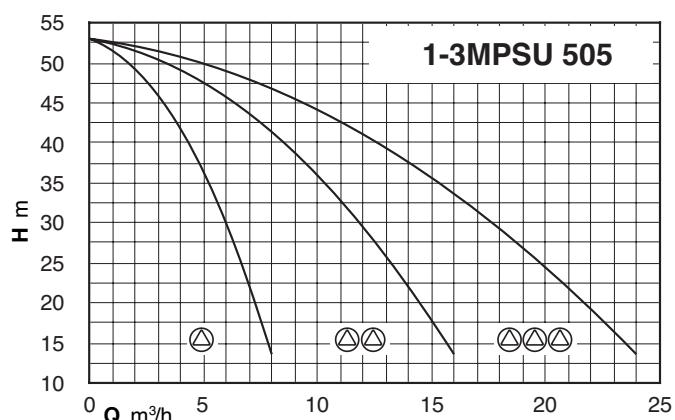

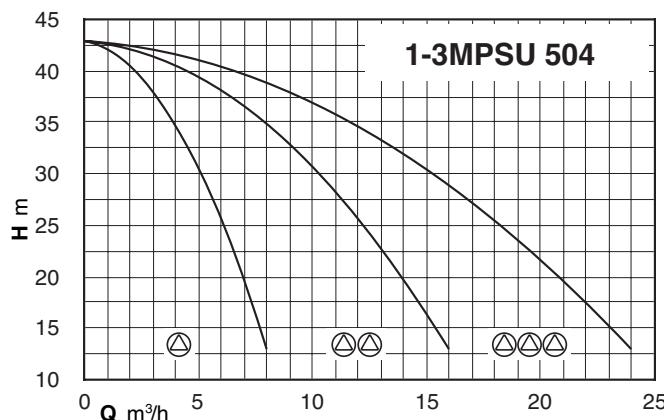

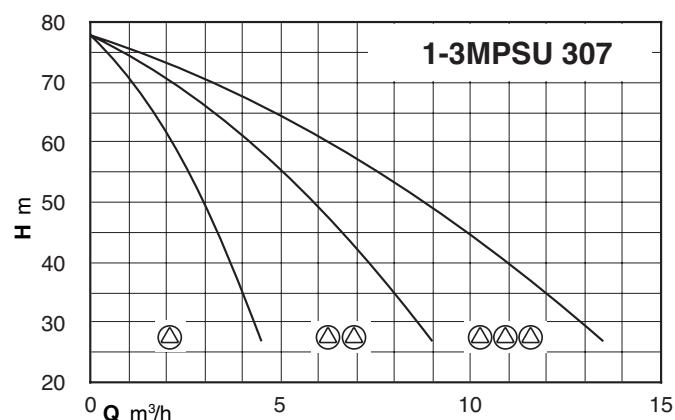

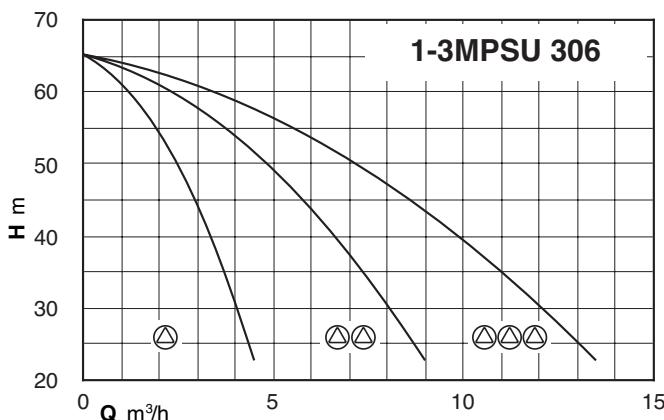

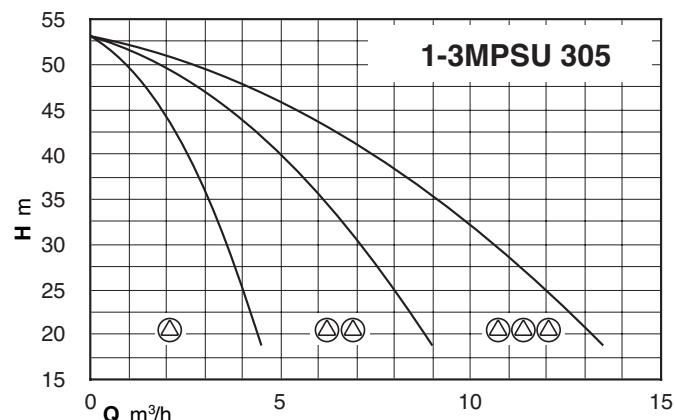

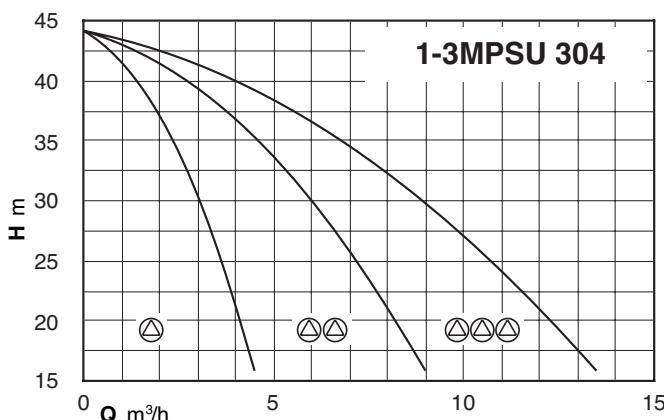

When installing the unit, connect in the delivery section to a diaphragm or galvanised tank.

The recommended sized are shown in the following page.

Special features on request

Pressure unit with 4, 5 and 6 pumps

Non-binding dimensions to be checked when ordering

BS. MXV

Pressure units with 1 to 3 multi-stage vertical, fixed or variable speed pumps (INVERTER)

Fixed speed units

BS 1-6F Pressure boosting sets with 1 to 6 fixed speed pump.
Sets with 4,5 and 6 pumps on request.

Depending on the reduction of the pressure in the system, the pressure switches determine the starting up of the pumps in sequence and the microprocessor alternates the starts.

Variable speed units with I-MAT

BS2-3V Pressure boosting sets with 2 to 3 variable speed pumps (with I-MAT).
Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

Variable speed pump units with WALL

BS2V Pressure boosting sets with 2 variable speed pumps with WALL.
Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

Construction

Automatic pressure boosting plant consisting of 1 to 6 vertical multistage pumps complete with ball, non return valve on the suction side and ball valves on the delivery side.

Suction and delivery manifolds made of 1.4301 EN 10088 (AISI 304) for units with 2 and 3 pumps.

Set up for mounting cylindrical tanks with G1 connection.

Electrical control boards:

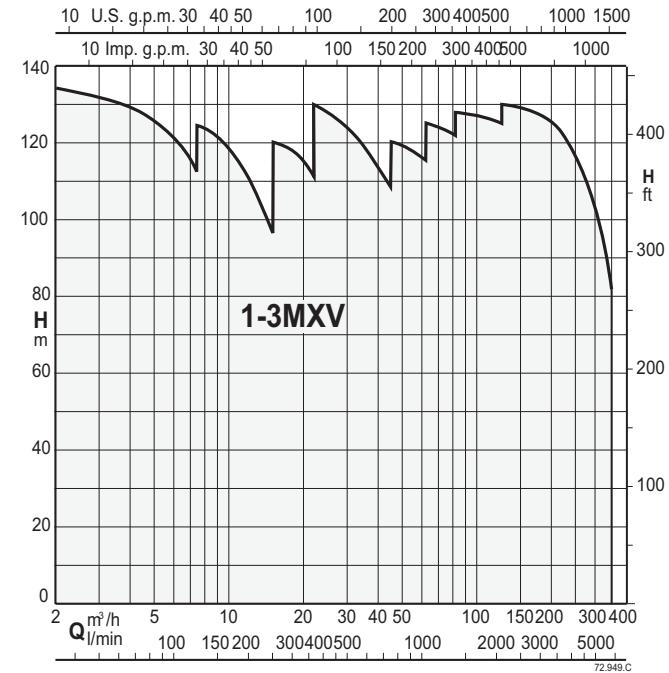

- with microprocessor control for fixed speed pumps. Motor starting is direct up to 5.5 kW and Y/Δ for powers from 7.5 to 37 kW.
- - with frequency converter for variable speed pump units.

The unit includes one pressure gauge and three adjustable differential pressure switches or pressure transducer.

Applications

To supply water in civil and industrial buildings.
For increasing network pressure (follow local specifications).

Coverage chart

Motor

2-pole induction motors, 50 Hz, $n \approx 2900$ 1/min.
Three-phase

230/400V $\pm 10\%$ up to a 3 kW
set up for inverter operation;
400/690V $\pm 10\%$ for 4 kW to 37 kW,
set up for inverter operation.

Single-phase 230 V $\pm 10\%$,
Insulation class F.
IP protection: IP55
Constructed in accordance with IEC 60034.
Other voltages and frequencies on request.

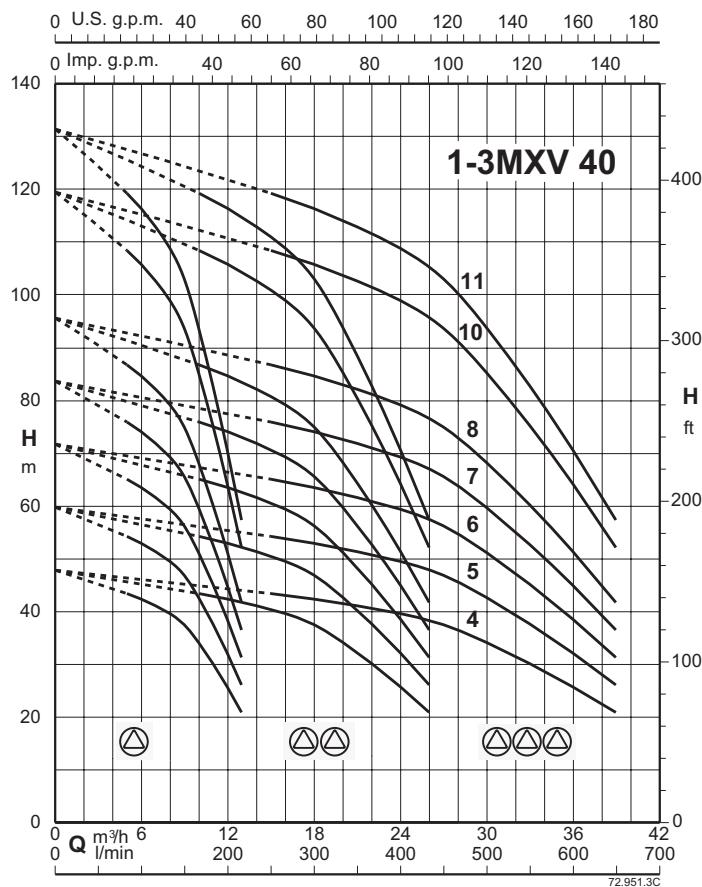

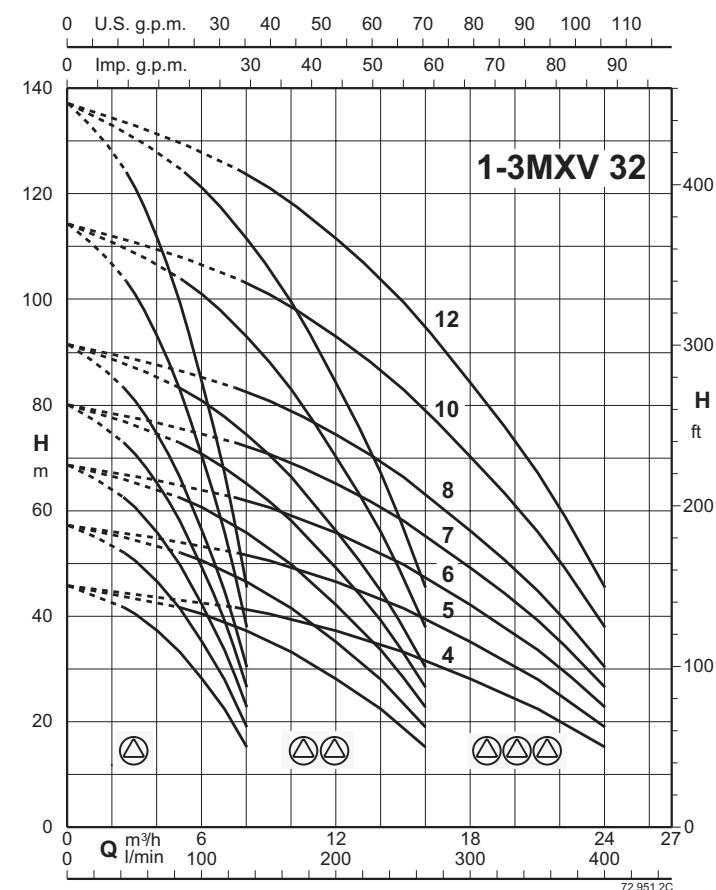

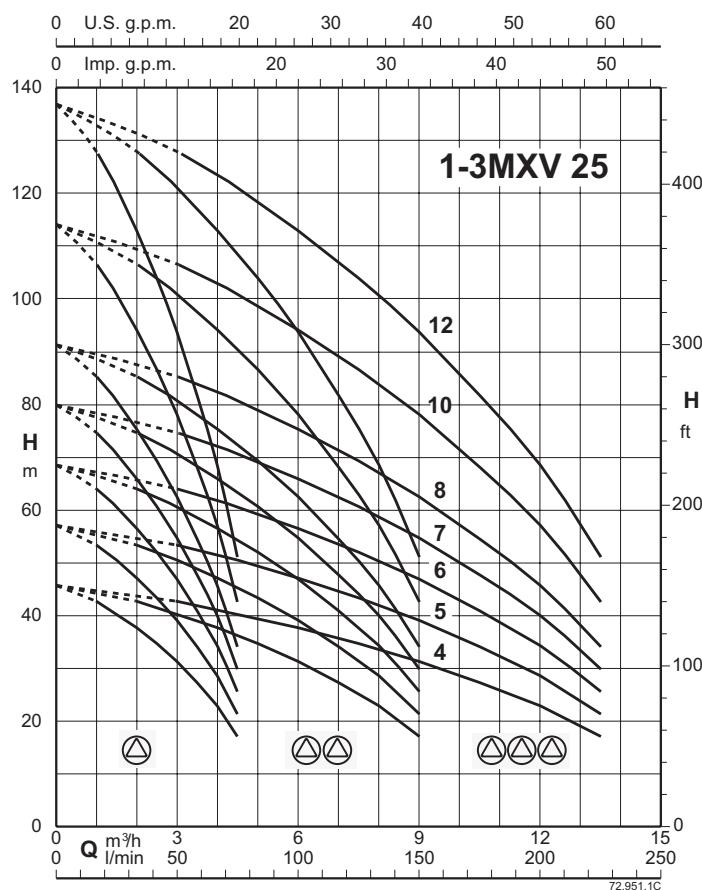

Vessels on request

When installing the unit, connect in the delivery section to a diaphragm or galvanised tank.
The recommended sizes are shown in the following page.

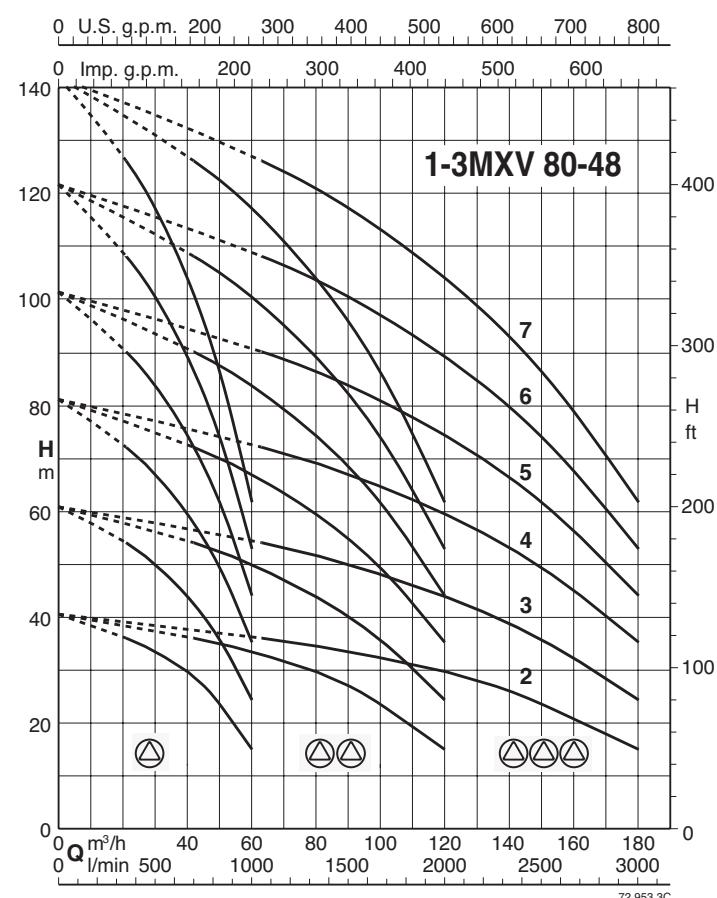

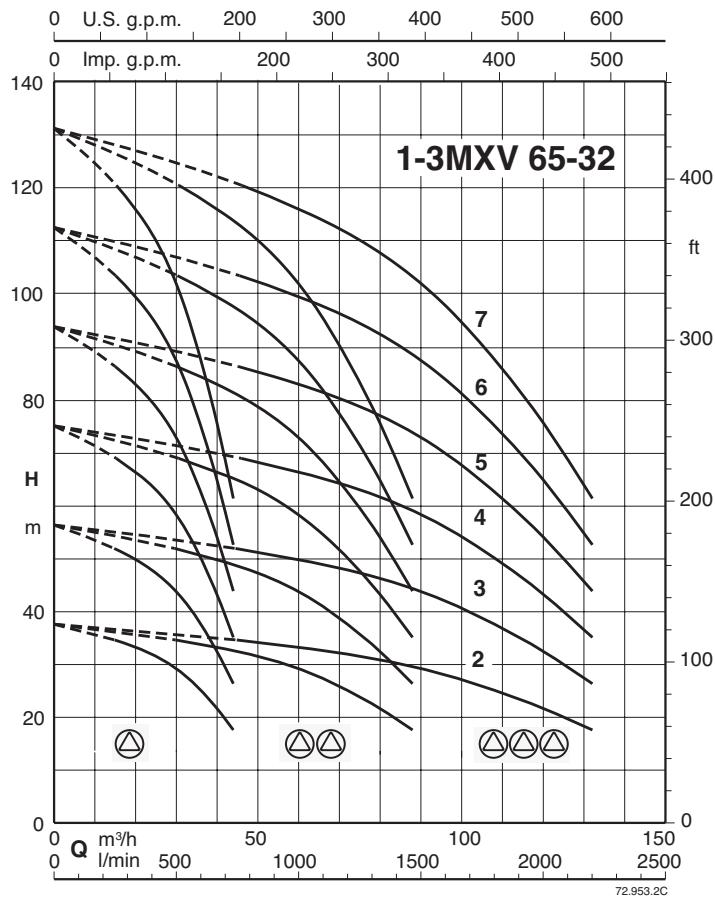

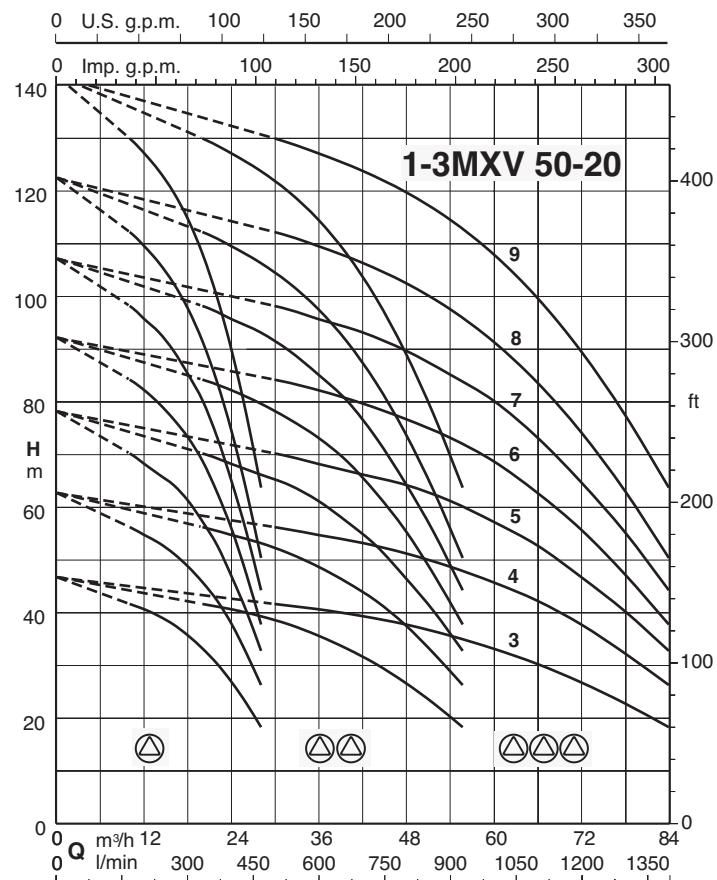

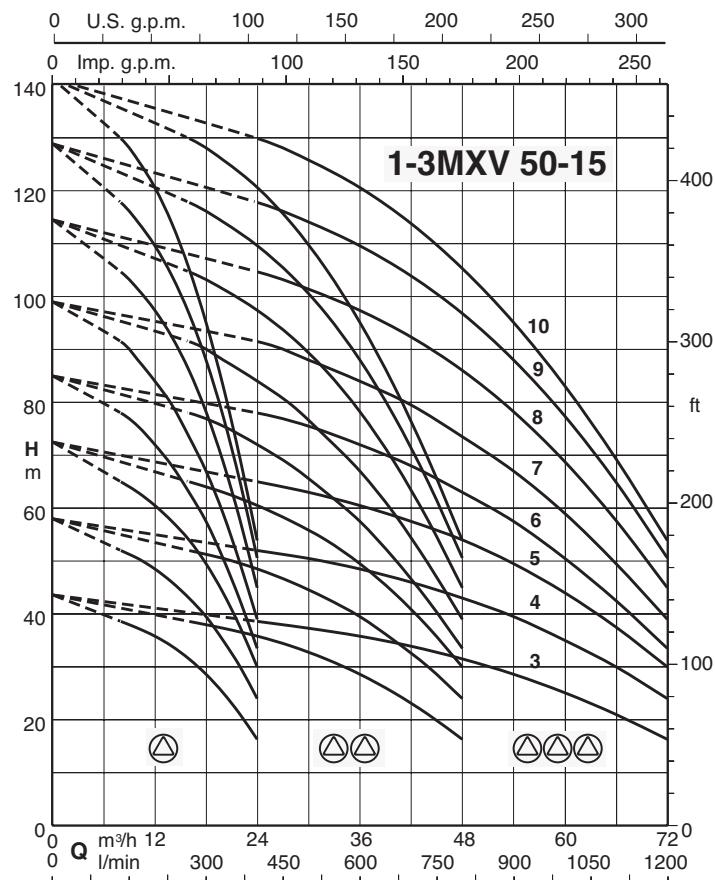

Special features on request

Pressure unit with 4, 5 and 6 pumps
