Electronic regulator for pumps

IDROMAT

Construction

Pumps control device provided with flow rate and pressure sensor
 Inlet and delivery connection ports of the same diameter.
 Built-in check valve.
 Pressure gauge 0-12 bar supplied as standard for IDROMAT 5.. (IDROMAT 6.. not present).
 Automatic reset function for the reset of the system without manual operation.

Applications

Automatic control of pumps for water supply and increase of network pressure.
 Control of starting/stopping of the pump when cocks are opened/closed.

For protection of the pump:

- against dry running;
- against the risk of operation without water at the inlet (caused by a lack of water inflow in the inlet pipe under positive suction head, by a non-immersed suction pipe, by excessive suctionlift or by air entering the suction pipe);
- against operation with closed connection ports.

Materials

Control Panel

Status indications and system reset

The three leds give the information about the system operativity, the first led indicates the presence of supply, the second led indicates if the pump is operating and the third led indicates if an alarm has occurred in the system.
 The Reset button allows to manually restart the system when an alarm occur.

Programming of the re-start pressure

The display allows to visualize the re-start pressure of the system, the buttons allow to change the re-start pressure value.
